

The seat back folds forward which automatically opens the attached nylon rip-proof mesh storage compartment on an extremely durable 1/4" diameter solid steel frame. Closing the front compartment to use the child seat is easily achieved by simply lifting the seat back and pushing rearward.

The clothes hanger bracket is concealed in the molded plastic handle. The steel bracket swings upward and locks into position. The 1/4" diameter steel bracket also has a 1/8" steel plate reinforcement on the bottom. Hangers with swivel hooks fit easily into the loop of the bracket. Two brackets are designed into the cart for maximum hanging capacity and flexibility.

The child's seat is molded of durable plastic as is the hinged back. An adjustable nylon safety belt is also provided.

The actual handle for the flex caddy is adjustable to suit different comfort needs of each individual shopper. The handle locks into place with a knob on the side of the molded plastic upright. Actual handle angles can be determined to meet SEARS requirements.

As with any molded plastic part, the SEARS FLEX CADDY can be molded or finished in practically any color or combination of colors.

An optional cup holder/baby bottle holder may be located on the handle.
